U.S. FOOD & DRUG ADMINISTRATION

MEMORANDUM

FROM: Vid Desai
Chief Information Officer (CIO)

TO: John Ellithorpe
DNAnexus, Inc.
System Owner

SUBJECT: Authorization to Operate for DNAnexus

DATE: August 2, 2023

In accordance with the Federal Risk and Authorization Management Program (FedRAMP), the Food and Drug Administration has completed a review of DNAnexus. A key element in this review was the FedRAMP approved security authorization package provided within the FedRAMP secure repository. The Food and Drug Administration believes this security authorization package accurately documents the DNAnexus cloud system and clearly defines current risk considerations.

Based on the Federal Information Processing Standard (FIPS) security categorization of "Moderate" and the provided Security Assessment, the Food and Drug Administration has determined that the FDA's implementation of the DNAnexus system meets the information security requirements and is granted an Authorization to Operate.

The security authorization of the information system will remain in effect for a period of three years in alignment with Office of Management and Budget Circular A-130 as long as:

- DNAnexus satisfies the requirement of implementing continuous monitoring activities as documented in FedRAMP's continuous monitoring requirements and DNAnexus Continuous Monitoring Plan;
- DNAnexus mitigates all open Plan of Action and Milestones (POA&M) action items agreed to in the Security Assessment Report (SAR) and as developed during the continuous monitoring activities; and
- Significant changes or critical vulnerabilities including any risks resulting from End of Life (EOL) or End of Support (EOS) system components are identified and managed in accordance with applicable Federal law, guidelines, and policies.

Point of Contact: Mr. Craig Taylor, FDA Chief Information Security Officer 301.796.6896.
